A Department of Ventura County Health Care Agency

Robert Levin, MD Health Officer/Medical Director

#### COVID-19 and the Use of Cloth Face Masks

## **Summary of Findings**

### <u>lssues</u>:

Should cloth masks be worn during this COVID-19 pandemic in either the community setting or in places of business where food is sold?

### Conclusions:

- 1. There is no incontrovertible, compelling or even a preponderance of evidence to support an Order to wear a cloth mask in the community setting at this time.
- 2. I am supportive of cashiers and customers wearing cloth masks inside a grocery store or any essential business where social distancing is difficult to maintain. Supporting evidence is not strong enough to issue an Order to mandate the use of cloth masks at this time; consumer preference is already accomplishing this in most parts of the County.

### Introduction

A number of counties in California have adopted recommendations regarding the use of cloth masks in the community setting. The evidence is not conclusive regarding whether this practice is helpful or harmful in reducing the spread of COVID-19. There are convincing arguments both for and against the use of cloth masks in public places (see table: The Pros and Cons of Wearing a Cloth Mask). In creating a guideline for Ventura County, we have considered the prevalence of COVID-19 in our community as well as our success in flattening the curve by implementing known infection control strategies such as strict social distancing.

Note that local, state, and national guidelines, when they support the use of masks, uniformly support the use of cloth masks only and recommend **against** the use of medical masks (whether called surgical or procedure masks or N95 respirators). There is a global shortage of personal protective equipment (PPE) for healthcare workers and without adequate supplies of masks, gloves and gowns, our medical professionals are not only putting themselves at risk, they are putting their patients at risk.

A study of 600 patrons at 6 retailers in Ventura County (see table: Grocery Store Masks Polling Data) demonstrates that over 50% of people choosing to wear face masks in public are wearing medical-grade masks. We urge those of you who have a supply of unused medical-grade masks to donate these for use by our local health care providers by going to vcemergency.com and using the "donate" tab.

## The Pros and Cons of Wearing a Cloth Mask

The following is information about the effectiveness of cloth masks and medical (surgical, procedure) masks in preventing infection that may prove useful in deciding whether to wear a cloth mask in the community setting. The public should not use medical masks due to a shortage for health care professionals. Medical masks are discussed below because cloth and medical masks are often compared in medical studies and also to show that they are by no means a perfect option for use in the community setting.

With these published and observed findings in mind, Public Health will not mandate that cloth face masks be worn in all public places in Ventura County at this time. Were the prevalence in our community to increase or with the advent of more convincing evidence in favor of this strategy, this guidance may change.

All community members should respect the desires of individual establishments or cities that have elected to require face masks. I endorse their doing so without reservation but based on the evidence, do not feel I can require it at this time.

This review is in no way intended to lead to the conclusion that one should use medical masks over cloth masks; medical masks are for health care providers. This review will leave the reader with **the two valid** choices of using either a cloth mask in a community setting or no mask at all.

The fact that there are more comments listed in the "Against" column is not a reflection of bias on behalf of this reviewer but rather that there seem to be more researchers performing studies that produced those results. More plentiful results do not mean more meaningful results.

The reason that this document is lengthy and does not point to a clear-cut conclusion is because there is no conclusive evidence on either side of the issue. One might say that the obvious choice then is to choose the more conservative masking side of the issue. This might be the clear approach were it not for concerns raised about the safety of wearing cloth masks and their effectiveness. If unable to accept the complexity of the issue, then rely on your beliefs.

Statements of endorsement and concern are expressed about the use of cloth masks by reputable organizations on both sides of the issue.

In an effort to better understand usage patterns in Ventura County, a survey was conducted of mask choices worn by individuals exiting selected places of business.

# **Grocery Store Mask Polling Data\***

Store	N95 Mask	Surgical Mask	Cloth Mask	Dust Mask	No Mask
Walmart	15	30	35	1	19
Oxnard					
Costco	13	33	42	4	8
Oxnard					
Vallarta	12	47	38	3	0
Oxnard					
Whole Foods	20	39	38	0	3
Oxnard					
Trader Joes	22	30	44	4	0
Ventura					
(Victoria)					
Target	17	31	41	1	10
Camarillo					
Total	99	210	238	13	40

<sup>\*</sup>This survey was performed on 4/23/2020. One hundred customers were counted as they exited each store and the type of mask each person was wearing was recorded.

This survey of types of masks that are being worn, in spite of frequent admonishments to the public not to use medical masks, is sobering.

# **Homemade Cloth Masks**

Material	Mean Percent Viral Filtration Efficiency
100% cotton T-shirt	51%
Scarf	49%
Pillowcase	51%
Antimicrobial pillowcase	69%
Cotton mix	70%
Linen	62%
Silk	54%

## **Recommendations for Homemade Cloth Face Masks**

The following guidance outlines safety considerations associated with homemade cloth masks.

### **Material Considerations**

When considering a fabric to make your mask, please keep in mind that some textile fabrics can contain dyes and chemicals from the factory.

• Try to avoid any fabrics that are labeled "wrinkle-free", "durable press" or "easy care finish" since these fabrics may be treated with a product that includes formaldehyde.

CDC recommends using 100% cotton fabric for making a cloth face mask. Although "organic cotton" would be the best choice, any clean woven cotton fabric should work.

• Do not use fabrics that have been in contact with harmful household chemicals such as paint removers, stain removers and cleaning products.

Once you have chosen a fabric to create your mask:

• Please make sure to launder the fabric at least two times before first use in order to ensure any harmful contaminants are removed. Be cautious of using scented detergent because the residual odor may cause a respiratory reaction.

#### **Other Considerations**

Cloth face coverings **should not** be placed on:

- Children under age 2
- Anyone who has trouble breathing
- Anyone who is unconscious
- Anyone who is incapacitated or otherwise unable to remove the mask without assistance

For CDC guidance on how to make a cloth mask, please visit <a href="https://www.cdc.gov/coronavirus/2019-ncov/prevent-getting-sick/diy-cloth-face-coverings.html">https://www.cdc.gov/coronavirus/2019-ncov/prevent-getting-sick/diy-cloth-face-coverings.html</a>

If you should decide to wear a cloth face mask, please remember to:

- Wash your hands after putting the mask on and after taking the mask off
- Do not touch your face or the mask while wearing it
- Disinfect areas where the mask is stored while not in use
- Wash your cloth mask daily
- Do not fail to abide by social distancing standards

### **Plexiglass Shields**

Plexiglass shields have been placed in many essential businesses as a barrier between the cashier and the customer. If interfering with the passage of respiratory droplets is the intent of those who wish to wear a mask, the same outcome might be achieved by the placement of plexiglass barriers at points of cashier-customer interaction in the grocery store and in other essential businesses where 6 feet of distance can't be maintained. <a href="https://abc3340.com/news/coronavirus/grocery-stores-protecting-workers-and-customers-from-covid-19">https://abc3340.com/news/coronavirus/grocery-stores-protecting-workers-and-customers-from-covid-19</a>
